Project Title: Fitness & Wellness Coaching Dashboard

Business Context:

Fitness coaching businesses or hybrid training platforms struggle to track performance of multiple programs and client regions. Coaches and business owners rely on guess work rather than data-driven decisions.

Stakeholders and goal:

Target users for this dashboard are head fitness coaches and business owners. The dashboard will be useful to monitor daily or monthly revenue, track lead-to-client conversions, identify performance of fitness programs, and evaluate regional market performance.

Scope boundaries:

In scope:

- Tracking financial performance (Total revenue, AOV).
- Analyzing conversion rates from lead acquisition to program enrollment.
- Evaluating products sales for each fitness program.
- Regional distribution of clients.
- Interactive filtering by date range, regions, program category, and coach.

Out scope:

- Real-time biometric tracking of clients.

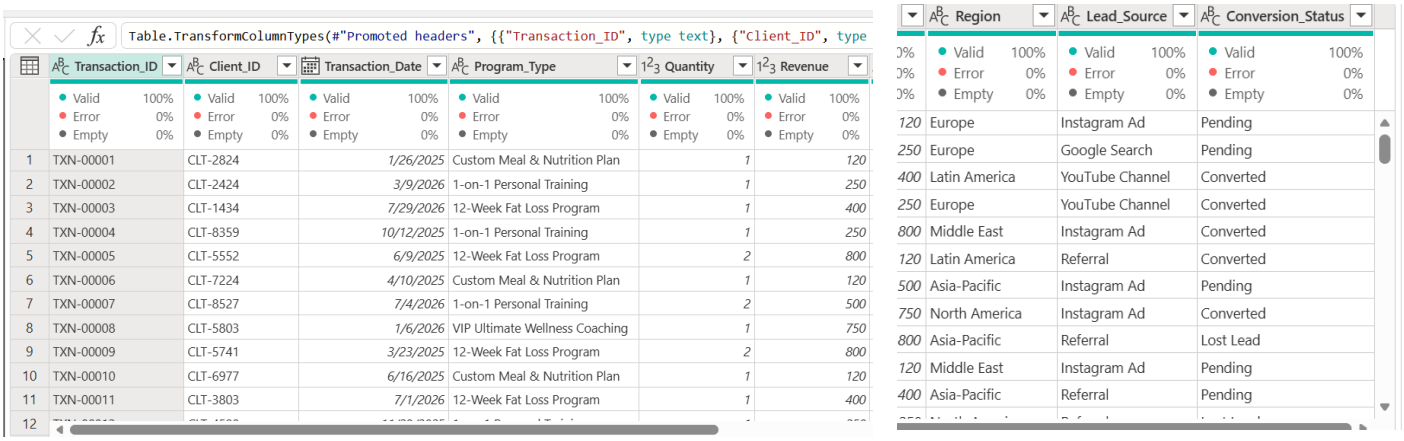

KPI definitions:

- Total revenue: sum of all completed transactions for coaching packages and programs over a selected time period.
- Average Order Value(AOV): total revenue divided on total number of transactions.
- Active Transactions / Volume: Total count of client coaching transactions processed.

Data Generation, Validation, Quality Review & Evidence:

- **Synthetic Data Generation:** Authored a custom Python script to generate a robust, controlled dataset of 20,000 fitness coaching sales transactions, defining realistic distributions for dates, program types, regions, quantities, and conversion statuses.
- **Validation & Review Process:**
  - Performed post-load validation in Power BI to cross-check that aggregations computed accurately without null or outlier distortions.

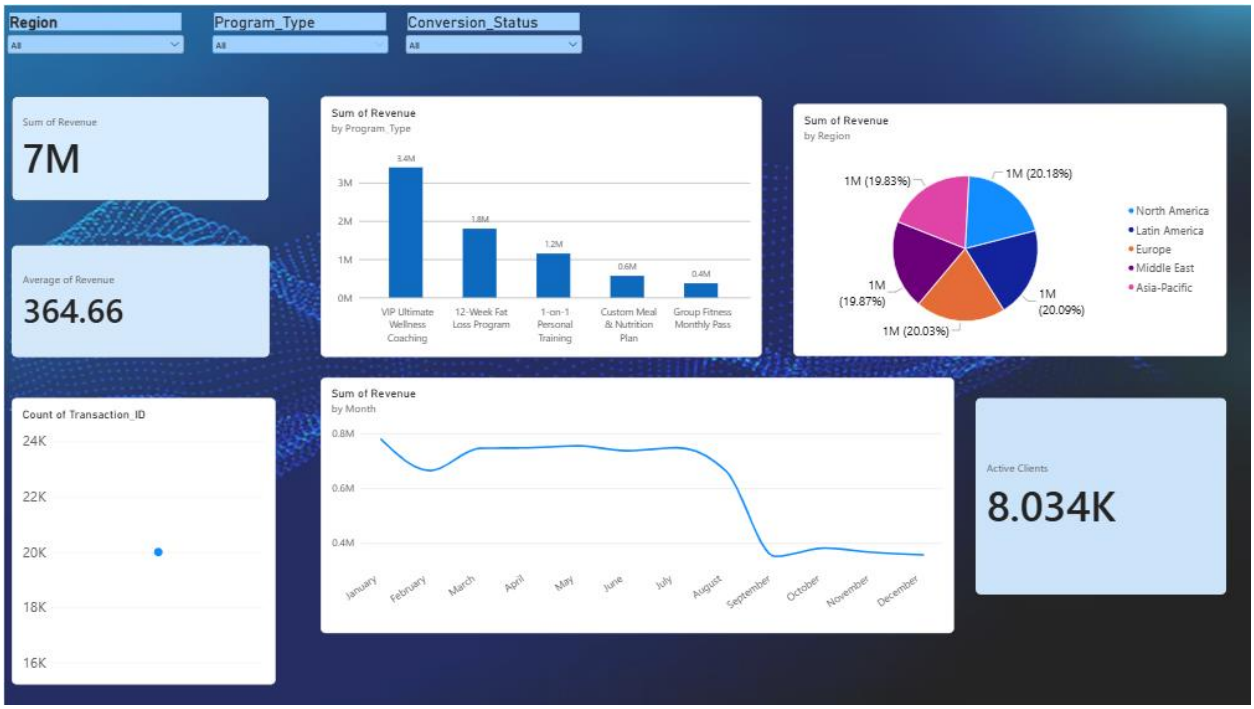

- Verified that interactive slicers (Region, Program Type, and Conversion Status) dynamically cross-filtered all visuals correctly across the canvas.

	Transaction_ID	Client_ID	Transaction_Date	Program_Type	Quantity	Revenue
1	TXN-00001	CLT-2824	1/26/2025	Custom Meal & Nutrition Plan	1	120
2	TXN-00002	CLT-2424	3/9/2026	1-on-1 Personal Training	1	250
3	TXN-00003	CLT-1434	7/29/2026	12-Week Fat Loss Program	1	400
4	TXN-00004	CLT-8359	10/12/2025	1-on-1 Personal Training	1	250
5	TXN-00005	CLT-5552	6/9/2025	12-Week Fat Loss Program	2	800
6	TXN-00006	CLT-7224	4/10/2025	Custom Meal & Nutrition Plan	1	120
7	TXN-00007	CLT-8527	7/4/2026	1-on-1 Personal Training	2	500
8	TXN-00008	CLT-5803	1/6/2026	VIP Ultimate Wellness Coaching	1	750
9	TXN-00009	CLT-5741	3/23/2025	12-Week Fat Loss Program	2	800

Interactive Features & Dashboard Architecture:

- **Slicers:** Added top-level interactive filters for **Region**, **Program Type**, and **Conversion Status** allowing dynamic cross-filtering across all visuals.
- **Visual Components:**
  - KPI summary cards for Revenue, Average Revenue, and Total Active Clients.
  - Bar charts comparing revenue contribution by program type.
  - Pie charts showing regional distribution.
  - Monthly line charts tracking revenue trends over time.

Limitations & Feature Improvements:

Limitations:

- Dataset is limited to historical point-in-time transactions without live lead-generation tracking.
- The model treats each transaction independently based on `Client_ID`, but it doesn't track multi-purchase loyalty, churn rates, or whether a client renewed their coaching package after the initial period.
- The data tracks categorical dimensions like `Program_Type` and `Region`, but it lacks deeper demographic or behavioral variables (such as client age groups or session attendance rates) that could explain *why* certain packages perform better.

Feature Improvements:

- Integrate real-time CRM data feeds and implement automated alerting for sudden drops in client conversion rates.
- Expand the data model to track repeat purchases over time so management can measure long-term client retention and profitability per acquisition channel.
- Incorporate Customer Acquisition Cost (CAC) metrics alongside revenue data to calculate Return on Ad Spend (ROAS) for marketing channels like Instagram Ads and YouTube.

Executive Summery with Actions:

Summery:

The Fitness & Wellness Coaching Sales Dashboard provides head coaches and business owners with centralized visibility into core financial performance, regional market distribution, and program sales trends across 20,000 transactions. Monitoring key metrics—including Total Revenue, Average Order Value (AOV), and Active Clients—leadership can evaluate organizational growth and identify high-performing revenue streams immediately.

Key Insights Derived from Dashboard Visuals:

- **Revenue & Sales Volume Trends:** The monthly trend analysis highlights seasonal demand cycles, identifying stable periods of high enrollment alongside critical revenue dips.
- **Product Performance Drivers:** Program revenue distribution reveals that some programs generate most total sales, outperforming other plans.

- **Geographic & Lead Source Effectiveness:** Regional distribution pie chart and lead source tracking demonstrate balanced market penetration across international territories, confirming where customer acquisition efforts yield the highest returns.
